

Project Order Delivery (POD)

Sell your services with our flexible project solution

RAMBASE

Project Order Delivery (POD)

Sell your services with our flexible project solution

Capture new revenue streams and deliver customer excellence with RamBase functionality that unites the new ways people and businesses operate. Project order delivery (POD) is **built to accommodate companies that are selling their services to customers**. POD delivers a suite of rich functionality and tools for a unified experience and handling of your projects.

Digitize

Connect siloed information into one platform that provides project information in a united dashboard view. Create and access data rich asset libraries and track your project milestones in real-time.

Integrated processes

RamBase applications seamlessly connect your data, workflows, assets, teams, inventory, logistics, contracts, fulfillment, and revenue to ensure you have the most accurate information on hand when you need it.

Enhance your customer experience

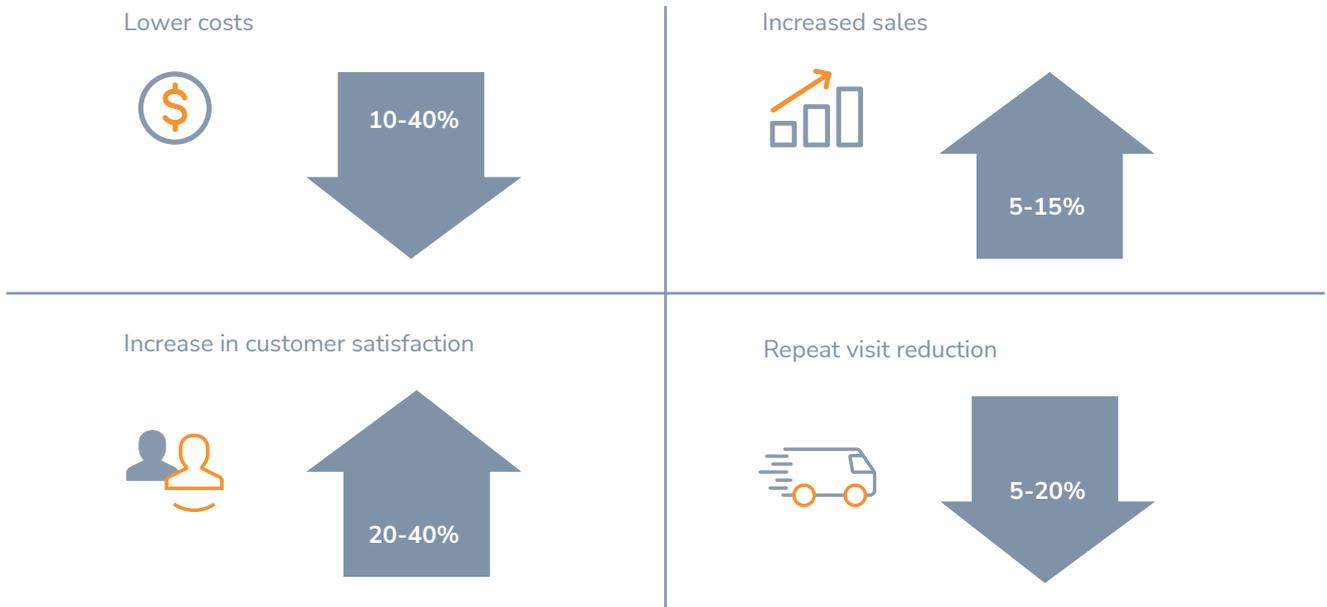

Your business depends on overseeing the full customer journey and what drives customer satisfaction. The Project Order module serves the needs of your team to deliver customer excellence with fast quoting, real-time project metrics, flexible project labor scheduling, and access to internal resources, including order data and inventory and billing information.

What can POD do for your business?

- ✓ Supports the full customer journey
- ✓ Connect project information into one platform
- ✓ Offers a deeply integrated suite of applications
- ✓ Accurate real-time project visibility
- ✓ Shared project platform improves project delivery
- ✓ Clarity into deadlines, milestones, budgets, and project status

Did you know?

Applying data and analytics to your projects and services leads to major performance improvements.

POD combines early stage planning, project order control, and lifecycle management tools that can handle the demands of industry-based services.

Feature highlights

Service analytics and reports

Use the built-in reports and dashboards to improve service performance with real-time asset management.

Work order management

Manage your workforce. Assign multiple technicians to a project. Work hours are logged towards the sales document.

Lifecycle tools

See the whole picture with data rich asset history of parts, equipment, and work hour log of your projects.

Invoices & expenses

Create fast and accurate project estimates. Facilitate invoicing and track expenses such as materials used, work hours, and cost-based pricing.

Customer management

Customer details can be easily managed. View the complete history of the customer's previous requests, work orders, invoices, and payment.

Cloud security assurance

Your data is protected by certified cyber security personell working 24/7 to keep your information safe from leaks or attacks.
